

OCEAN STAR INTERNATIONAL, INC.

# Superior Brine Shrimp Flakes

- Contains Spirulina for color enhancement and disease resistance
- Contains yeast for disease resistance
- Contains  $\beta$ -carotene for color enhancement
- Colors the water rich dark brown to reduce predation and positive phototaxis
- High protein promotes rapid weight gain
- Vitamin supplement for maximum growth
- Highly digestible ingredients for maximum absorption and low waste production
- No Antibiotics or Chemical Preservatives

## Guaranteed Analysis

Protein, (454g & 200g)	min.	42%
Protein, (5kg)	min.	38%
Fat,	min.	6%
Fiber,	max.	2%
Moisture,	max.	8%

Superior Brine Shrimp Flakes are made from all natural, highly-nutritious ingredients. High levels of protein, fats and vitamins promote rapid weight gain and excellent survival. Color enhancement is stimulated by a high level of Spirulina and betacarotene. Disease resistance is improved by the Spirulina and the beta-glucans from the yeast. This diet will color the water a rich dark brownish-black to reduce predation and crowding toward the light. The diet can be fed to both fish and shrimp.

## Feeding

Use during the initial larval stages (zoea and mysis) of larval shrimp feeding. Also use when doing water changes. Can also be used to raise larval fishes.

For shrimp, feed 20-60 g per 1 million fry (0.5-1.0 g per 1,000 L of water). Place flakes in 60-250 mesh (250-57 micron) plankton bag and rubwash flakes to reduce their size. Feed immediately 4-6 times per day.

For fish, grind flakes to an appropriate size. Mix with water from the tank and immediately feed an amount which the fish will consume in 3-5 minutes. Feed 2-6 times per day.

## Ingredients

Brine Shrimp, Fish Meal, Artemia Oil, Fish Oil, Vitamin Supplement, Vegetable Gum (binder), Food Grade Color, Salt.

## Available Sizes

200 g / can x 12 cans / case  
 454 g / can x 6 cans / case  
 5 kg / drum
